Preparing a needs assessment

About Public Health England

Public Health England exists to protect and improve the nation’s health and wellbeing, and reduce health inequalities. It does this through advocacy, partnerships, world-class science, knowledge and intelligence, and the delivery of specialist public health services. PHE is an operationally autonomous executive agency of the Department of Health.

Executive summary

This document has been developed in response to a significant number of enquiries received each year from health visiting students who, as part of their university course, have been asked to develop a local needs assessment. The resources provided by Public Health England and specifically the Child and Maternal (ChiMat) Health Intelligence Network are often recommended as a starting point for such projects.

The following sections give guidance and links to relevant data sources, tools and documents to help health visiting students when undertaking a needs assessment and are supported by a using ChiMat section on our website which follows the commissioning cycle http://www.chimat.org.uk/usingchimat.

A good needs assessment should:
- establish the current and future state of the local population's health and wellbeing over the short term (3 - 5 years) and long term (5 – 10 years), and
- map local service provision

This document is based on developing a needs assessment at local authority level further information on which may be found in Joint Strategic Needs Assessments and Joint Health and Wellbeing Strategies https://www.gov.uk/government/publications/jsnas-and-jhws-statutory-guidance.

The document also provides guidance on accessing data at a lower level and its limitations.
Preparing a needs assessment

Determining the population

There are a number of tools which you can use to help gain an understanding of a local population:

**JSNA Navigator – Children and Young People**

The JSNA Navigator - Children and Young People takes you directly to the data which you need when conducting a joint strategic needs assessment (JSNA) locally for children and young people. This tool is available at [www.chimat.org.uk/jsnanavigator](http://www.chimat.org.uk/jsnanavigator)

**ChiMat needs assessment reports**

The ChiMat needs assessment reports give appropriate evidence-based information on prevalence, incidence and risk factors affecting children’s health and the provision of healthcare services.

In addition to providing information for needs assessments, these reports also help you to develop a business case, justify investment, initiate conversations around service improvements and carry out a service review or local audit.

The main ones to use are:
- Child and adolescent mental health (CAMHS)
- Children and young people with disabilities
- Demographic profile
- Maternity

You can obtain a needs assessment report for your local area at [http://atlas.chimat.org.uk/IAS/profiles/needsassessments](http://atlas.chimat.org.uk/IAS/profiles/needsassessments)

A short guide to the use and interpretation of the reports is also available on the same page.

The content of these reports can be exported directly into a Microsoft word document for editing or can be copied by clicking on the pdf export button.

Population data is also available separately within Data Atlas. Data Atlas brings together a range of data and statistics on child and maternal health into one easily accessible hub and is available at [http://atlas.chimat.org.uk/IAS/dataviews](http://atlas.chimat.org.uk/IAS/dataviews)
Preparing a needs assessment

Additional supporting resources

If you are unfamiliar with the use of the data provided in these reports and Data Atlas, the following document and web page will provide you with some guidance:

- Technical briefing 3: commonly used public health statistics and their confidence intervals

- More about maps and data
  http://atlas.chimat.org.uk/IAS/dataviews/about

Small area data

Small areas are taken to include any geographical area below an English local authority district. Often there is only a limited range of datasets available for these small areas. There may be no demographic data which can mean that it is difficult to calculate rates and compare data. This means that data for small areas has to be used with caution.

Using small area data

Finding small area data

Some data for small areas is available. Local Health gives you access to interactive maps, data and reports at electoral ward, medium super output area (MSOAs are small "neighbourhood" size areas) level as well as for whole local authorities. The website for this tool is www.localhealth.org.uk

The general practice profiles present a range of practice-level indicators drawn from the latest available data. The information is shown in a variety of different charts and the profiles can be found at http://fingertips.phe.org.uk/profile/general-practice
Identifying local health issues

Having identified the population it is important to review the health priorities for the population and their priority for service provision. The previous data sources and tools can support you in identifying key priorities as well as the following additional tools.

The Child Health Profiles provide a snapshot of child health and wellbeing for each local authority in England using key health indicators, which enable comparison locally, regionally and nationally. The profiles are available on the ChiMat website - www.chimat.org.uk/profiles

In addition NHS England and the Child and Maternal Health Intelligence Network have developed a health profile of public health outcomes relating to early years (children aged 0-5 years) http://atlas.chimat.org.uk/IAS/dataviews/earlyyearsprofile.

The Children and Young People’s Health Benchmarking Tool brings together and builds on health outcome data from the Public Health Outcomes Framework and the NHS Outcomes Framework. It is available at http://fingertips.phe.org.uk/profile/cyphof

PHE also has a data and knowledge gateway which gives a single point of access to data and analysis tools from across the organisation. Here you will find other relevant tools and data sources such as:

- Public Health Outcomes Framework
- Strategic Health Asset Planning and Evaluation (SHAPE)
- NCMP Local Authority Profile
- Sexual and Reproductive Health Profiles

Other data sources and tools

Although this document focuses on the support available from PHE there are various data sources and tools that may be of value. The Tools and Data Directory helps you find and understand when to use the wide range of tools and data collections currently available. It is available at www.chimat.org.uk/directory
